KHANFT

Final Cut Pro Plugins — User Guide

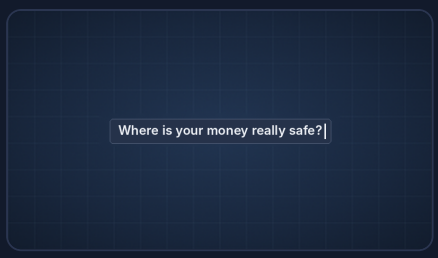

18 free effects, titles and transitions built in Apple Motion. What each one does, how to install them, and how to use them in your edits.

AT A GLANCE

What's in the pack

Four kinds of plugin. Each one shows up in its own place in Final Cut Pro.

Effects drag onto a clip

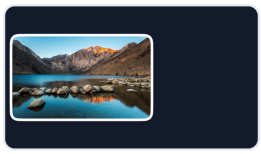

BOX

Float

Highlight

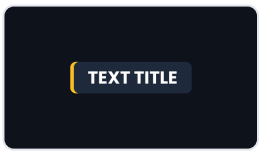

Outline

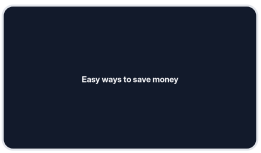

Photo Card

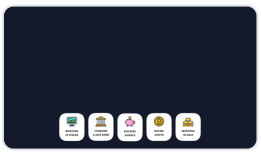

Text & card titles drag above a clip

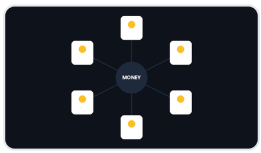

Text Type 1

Words Type 1

Cards Type 1

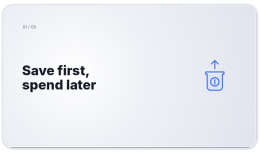

Cards Type 2

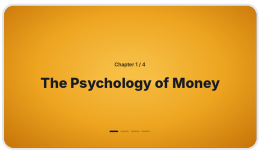

Section cards (titles) drag into the timeline

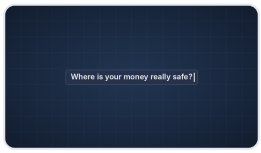

Section 1

2 · Page Drop

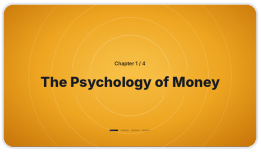

3 · Colour Field

4 · Typed Question

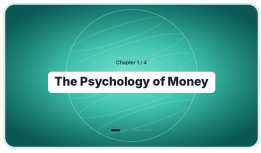

5 · Ledger Orbit

6 · Colour Motion

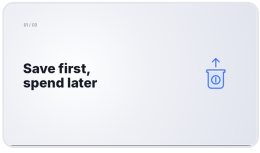

7 · Finance Motion

8 · Graphic Motion

Transition drag between two clips

Page Drop Transition

> All plugins are built for 16:9 projects at 4K (3840×2160) and also work in 1080p. Text fields accept any language; the card titles include Bangla font choices (Kohinoor Bangla, Bangla Sangam MN, Bangla MN) that ship with macOS.

SETUP

Install in 2 minutes

You need Final Cut Pro on a Mac. Apple Motion is not required.

1. **Download.** Open `github.com/KhanFT787/KhanFT-FCP-Motion-Templates`, click the green **Code** button, then **Download ZIP**. Unzip it.
2. **Open your templates folder.** In Finder press ⇧ ⌘ G and go to `~/Movies/Motion Templates.localized`. If it doesn't exist, create it, along with the subfolders shown below.
3. **Copy the KhanFT folders.** Copy each **KhanFT** folder from the download into the matching folder on your Mac.
4. **Restart Final Cut Pro.** The plugins appear under a category called **KhanFT**.

```
~/Movies/Motion Templates.localized/
├── Effects.localized/
│   └── KhanFT/       ← 5 effects
├── Titles.localized/
│   └── KhanFT/       ← text, cards and section cards
└── Transitions.localized/
    └── KhanFT/       ← Page Drop Transition
```

> Inside **Titles.localized/KhanFT** you'll also see `.py` scripts and a `_build` folder. These are build tools and are not needed to use the plugins; you can leave them out.

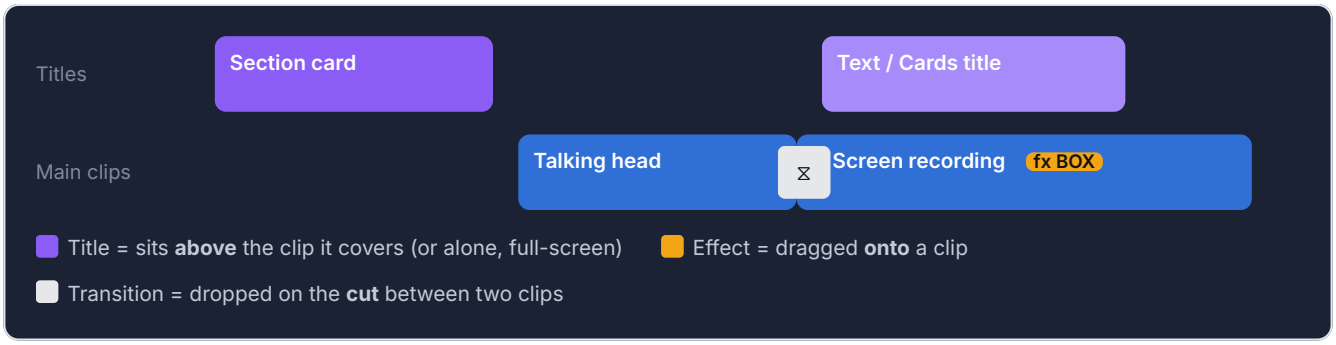

Where to find them

TYPE	OPEN	THEN
Effects	Effects browser ⌘ 5	Video → **KhanFT**
Titles	Titles and Generators sidebar ⌥ ⌘ 1	Titles → **KhanFT**
Transition	Transitions browser ^ ⌘ 5	**KhanFT**

BASICS

How to use any KhanFT plugin

The same four moves work for every plugin in the pack.

1. **Place it.** Drag an **effect** onto a clip. Drag a **title** into the timeline above the clip it should cover (or on its own for a full-screen section card). Drag the **transition** onto the cut between two clips.
2. **Open the controls.** Select it in the timeline and open the Inspector ⌘ 4. Every setting described in this guide is there, grouped by name (Icon..., Counter..., Title...).
3. **Type your text.** Titles have their text fields at the top of the Inspector (e.g. *Title Line 1*, *Card 3 Text*). You can also double-click the text in the Viewer.
4. **Set the length.** Drag the title's edge to make it longer or shorter. The in-animation plays at the start and the out-animation at the end automatically, so you never need keyframes.

Three controls you'll use a lot

Position
Any control called *Position* (Icon Position, Title Position, Card Position...) shows an on-screen handle in the Viewer. Drag it to move that element.

Custom Image
Pick *Custom Image* in the Icon menu, click the image well next to *Custom Image*, click your PNG in the browser, then click **Apply Clip** in the Viewer.

Reset Layout
Moved things around and want to start over? Tick *Reset Layout* on section cards to snap everything back to default.

Effects

Drag onto a clip, then adjust in the Video Inspector.

EFFECT KhanFT BOX

Places your footage inside an animated framed box that sits on top of whatever is below it. The box can be a rectangle, a rounded card or a full circle, with a solid or animated gradient border, drop shadow, spotlight and vignette.

Best for: screen recordings, B-roll or a face-cam shown as a framed picture-in-picture over a background.

ANIMATION	In: Full Screen · Pop · Slide (4 sides) · Fade · Reveal · Out: same set · Speed: Snap · Normal · Slow
BOX	Box Shape · Box Center · Circle Amount · Scale · Width · Height · Rotation · Roundness
FOOTAGE	Footage Zoom · Footage Offset
STYLE	Border: Solid / Gradient · Gradient Speed · Shadow · Spotlight · Vignette

EFFECT KhanFT Float

Adds a gentle, endless floating motion: a soft up-and-down bob, a slow sideways drift and a slight tilt, with an optional shadow. No keyframes needed.

Best for: PNG icons, photos, stickers or cards that should feel alive instead of sitting still.

MOTION	Amplitude · Float Speed · Drift Amount · Drift Speed · Tilt Amount · Tilt Speed
LOOK	Shadow

EFFECT KhanFT Highlight

Spotlights one area of the frame. Everything outside a circle or rectangle is dimmed, blurred, desaturated or tinted, the area can zoom in slightly, and an optional border outlines it.

Best for: pointing at a number on a chart, a line in a document or a button in a screen recording.

SHAPE	Circle / Rectangle · Position · Circle Size · Width · Height · Roundness · Edge Softness · Zoom
BACKGROUND	Opacity · Colour · Desaturate · Blur
BORDER	Border · Colour · Thickness
ANIMATION	Animate In / Out · Speed: Snap · Normal · Slow

EFFECT KhanFT Outline

Draws a clean border and/or a soft glow around the edges of the clip. On cut-out images (PNG with transparency) it follows the shape of the object.

Best for: making cut-out people, products or logos pop off the background.

BORDER	Border on/off · Colour · Thickness · Position · Opacity
GLOW	Glow on/off · Colour · Size · Softness · Opacity

EFFECT KhanFT Photo Card

Turns a clip into a floating photo card: rounded corners, outline, soft shadow, a gentle float and an optional 'running light' that travels around the edge.

Best for: showing a photo, screenshot or news clipping as an object in the scene.

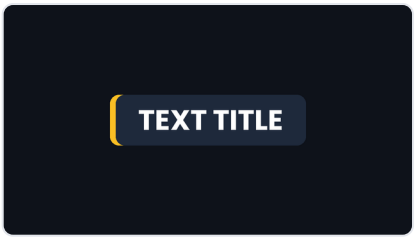

ANIMATION	In: Pop · Slide (4 sides) · Out: Pop · Slide (4 sides) · Speed: Snap · Normal · Slow
CARD	Card Position · Card Size · Roundness · Outline Colour · Thickness
SHADOW & FLOAT	Shadow Opacity · Softness · Distance · Angle · Colour · Float Height · Float Speed
RUNNING LIGHT	On/off · Colour · Thickness · Length · Speed · Direction

TITLES

Text titles

Drag above a clip. Type your words in the Title Inspector.

TITLE KhanFT Text Type 1

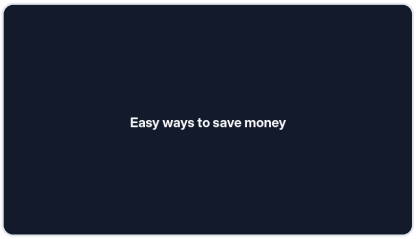

A single text label with a choice of background styles and one-click placement. The whole block animates in and out.

Best for: key terms, names, lower thirds and on-screen notes.

LAYOUT	Placement: Center · Lower Third L/C/R · Top L/C/R · Middle L/R · Position · Title Size
BACKGROUND	None · Box · Box + Accent Bar · Underline · Side Bar · Highlight · Box Colour · Opacity · Roundness · Padding X/Y · Border · Shadow · Accent Colour · Thickness
ANIMATION	In: Pop · Fade Up · Slide · Expand · Out: Pop · Fade Down · Slide · Collapse · Float

TITLE KhanFT Words Type 1

Same look and controls as Text Type 1, but the text reveals word by word, with each word rising into place.

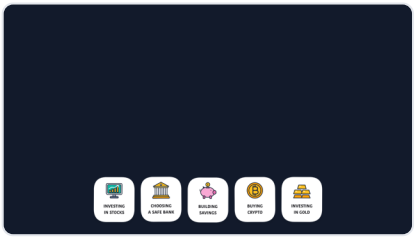

Best for: phrases that should land as the narrator says them; short emphatic lines.

SAME AS TEXT TYPE 1	Placement · Background styles · Box & accent · Float
WORD REVEAL	Word In Speed · Word Rise · Word Out Speed · Word Exit Opacity
ANIMATION	In/Out: Box Grow · Pop · Fade · Slide

Card titles

Animated icon cards for lists and maps of ideas.

TITLE KhanFT Cards Type 1

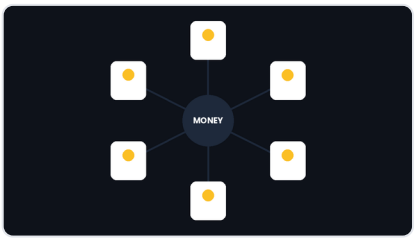

A row (straight or arc) of up to 7 icon cards, each with its own text and icon. Any card can be highlighted while the others dim, so you can walk through a list point by point.

Best for: lists and options: “5 places to keep your money”, steps of a process.

CARDS	Number of Cards: 1–7 · Layout: Straight / Arc · Arc Height · Tilt · Row Position · Card Size
PER CARD	Card N Text · Card N Icon: Stocks · Bank · Savings · Crypto · Gold · Loan · Custom Image · Card N Custom Image · Card N Highlight
MOTION	Entrance From: Bottom · Top · Left · Right · Exit Order · Float
STYLE	Card & border colours · Highlight colours & glow · Font (Bangla-ready) · Text Size · Colour

TITLE KhanFT Cards Type 2

A hub-and-spoke map: one centre node with up to 10 cards around it, joined by lines. Each card's angle and distance from the centre can be set, and cards can be highlighted.

Best for: showing what something is made of or connected to: “what affects your money”.

CENTRE	Center Text · Shape: Circle · Square · Card · Size · Colours · Border · Center Icon / Custom Image
CARDS	Number of Cards: 1–10 · Spread · Card N Text · Icon · Angle · Distance · Highlight
LINES & MOTION	Lines on/off · Colour · Opacity · Thickness · Pop Order: One by One / All Together · Float

SECTION CARDS

Section cards

Full-screen chapter cards that tell viewers a new part of the video is starting.

Section Type 1 — the simple one

A full-screen colour panel (solid or two-colour gradient) that wipes in from any side or opens from the centre, with an optional accent line, vignette and texture. It has no text of its own: stack a **Text Type 1** or **Words Type 1** on top to write your chapter name.

Entrance: From Top/Bottom/Left/Right · Centre Out · Accent Line: Top · Bottom · Centre

Section Types 2–8 share one control system

Learn it once and it works the same on every card. Each part can be switched on or off, styled and moved.

Entrance / Exit
Cut, Fade, Zoom, Rise, Slide and five “Drop” styles (Blur, Sleek, Bounce, Stretch, Swing). Set speed and Motion Feel (Smooth · Snappy · Gentle Bounce).

Background
Colour presets or Custom (light / mid / edge colours), plus Vignette and Grain. Some types add Slow Push-in.

Icon
Optional floating icon: Savings, Bank, Gold, Stocks, Crypto, Loan or your own PNG. Size, position, in/out animation, float and shadow.

Counter
Small chapter label such as “01 / 03” or “Chapter 2”. Its own animation, float and optional box.

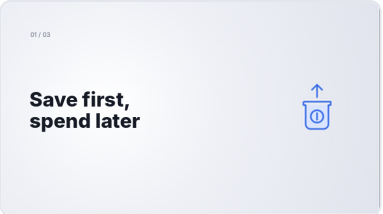

Title
Main heading (one or two lines). Choose how words come in and out, float, and an optional box behind the text.

Pips
Progress dots under the title. Set how many and which one is current, so viewers see where they are in the video.

Reset Layout
Puts every moved element back to its default position.

Section Types 2–8

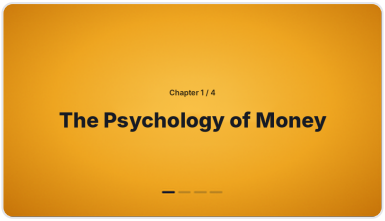

Same controls as above. What makes each one different is in amber.

Section Type 2 – Page Drop

A light “paper” card drops in. Two title lines on the left, icon on the right.

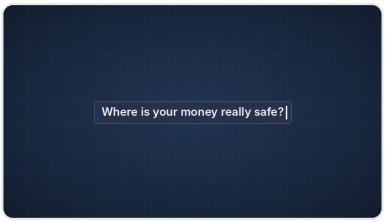

Card colour: Cloud · Paper · Mint · Blush · Custom

Section Type 3 – Colour Field

Bold full-screen colour with a centred title and progress pips.

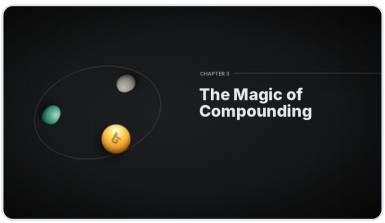

14 colour presets (Amber, Teal, Coral, Indigo, Sky...)

Section Type 4 – Typed Question

A question types itself out, with a blinking cursor, over a subtle grid.

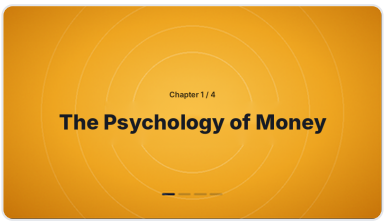

Grid Motion: Drift · Pan · Breathe · Light Sweep; up to 10 pips

Section Type 5 – Ledger Orbit

Dark, premium look: chapter label, two-line title and objects orbiting on a ring.

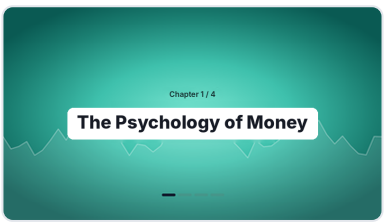

Objects: Coin and Stones · Three Coins · Custom Images

Section Type 6 – Colour Motion

Colour Field with a living background layer.

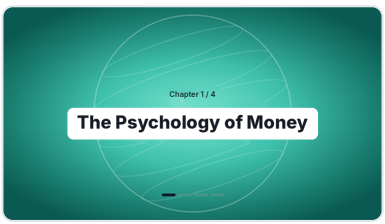

Motion Layer: Rings, Light Sweep, Dot Grid, Shapes, Glow, Bokeh, Rays, Ribbons, Stars

Section Type 7 – Finance Motion

Colour Field with finance-themed motion behind the title.

Motion Layer: Chart Line, Candlesticks, Market Bars, Digits, Tickers, Rising Coins

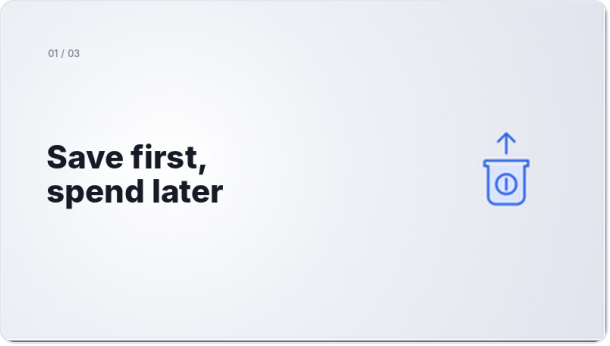

Section Type 8 – Graphic Motion

Colour Field with clean geometric motion.

Motion Layer: Wire Globe, Wire Cube, Perspective Floor, Parallax Hills, Orbit Dots, Scan Line

TRANSITION

Page Drop Transition

A paper slate sweeps across the cut between two clips, matching the look of Section Type 2. Drop it on an edit point and drag its edges to change how long it lasts.

DIRECTION	Down · Up · Left · Right
MOTION FEEL	Smooth · Snappy · Gentle Bounce
COLOUR	Slate Colour

HELP

Tips & troubleshooting

Plugins don't show up
Check the folder names exactly match page 3 (including `.localized`), then quit and reopen Final Cut Pro.

Icons or textures are missing in a title
The plugin's `Media` folder didn't get copied. Copy the whole plugin folder, not just the file inside it.

Bangla text looks wrong
Pick a Bangla font (Kohinoor Bangla, Bangla Sangam MN or Bangla MN) in the Font menu or Text Inspector.

Playback stutters
Section cards with motion layers are heavy in 4K. Render (`^` `R`) or lower playback quality in the Viewer menu.

Save your favourite settings
Once a title looks right, copy it and paste it into the next chapter, then just change the text and the pip number.

Mix with other plugins
Effects stack: try Float + Outline on a cut-out PNG, or Photo Card on a screenshot under a Text Type 1 label.
